IN BUSINESS—First exchange area telephone cable to be made in the new Western Electric plant at Millard was shipped Monday. Three reels containing 12,650 feet were sent to Bell telephone operating companies in Ohio, Illinois and Indiana. The view above shows twisted pairs of wires being drawn from spools and twisted into cable core on the drum stranding machine in the 680 by 700 foot cable building. About 60 percent of the manufacturing facilities in the cable plant have been installed.
